

Project 1 – Group 3

Factors Affecting the Student Attendance Rate

Overview

Background

Why:

Student attendance at school is an important part of a child's development into adulthood, and a predictor for achievement and also increased opportunities for economic advancement later in life.

Data Source:

Refer to the end

Purpose:

The relative performance of Schools and the factors that affect school attendance rates has implications for individuals and society, and therefore is a subject of research by professionals in this field.

Directions:

This project will use data published by the Queensland State Government on attendance rates for students enrolled in both primary and secondary school for the years 2015 to 2019, and offence rates for Local Government Areas together with Australian Bureau of Statistics data on relative Socio-Economic Index for Areas to explore some aspects of how crime rates and socio-economic factors affect student attendance rates.

Where:

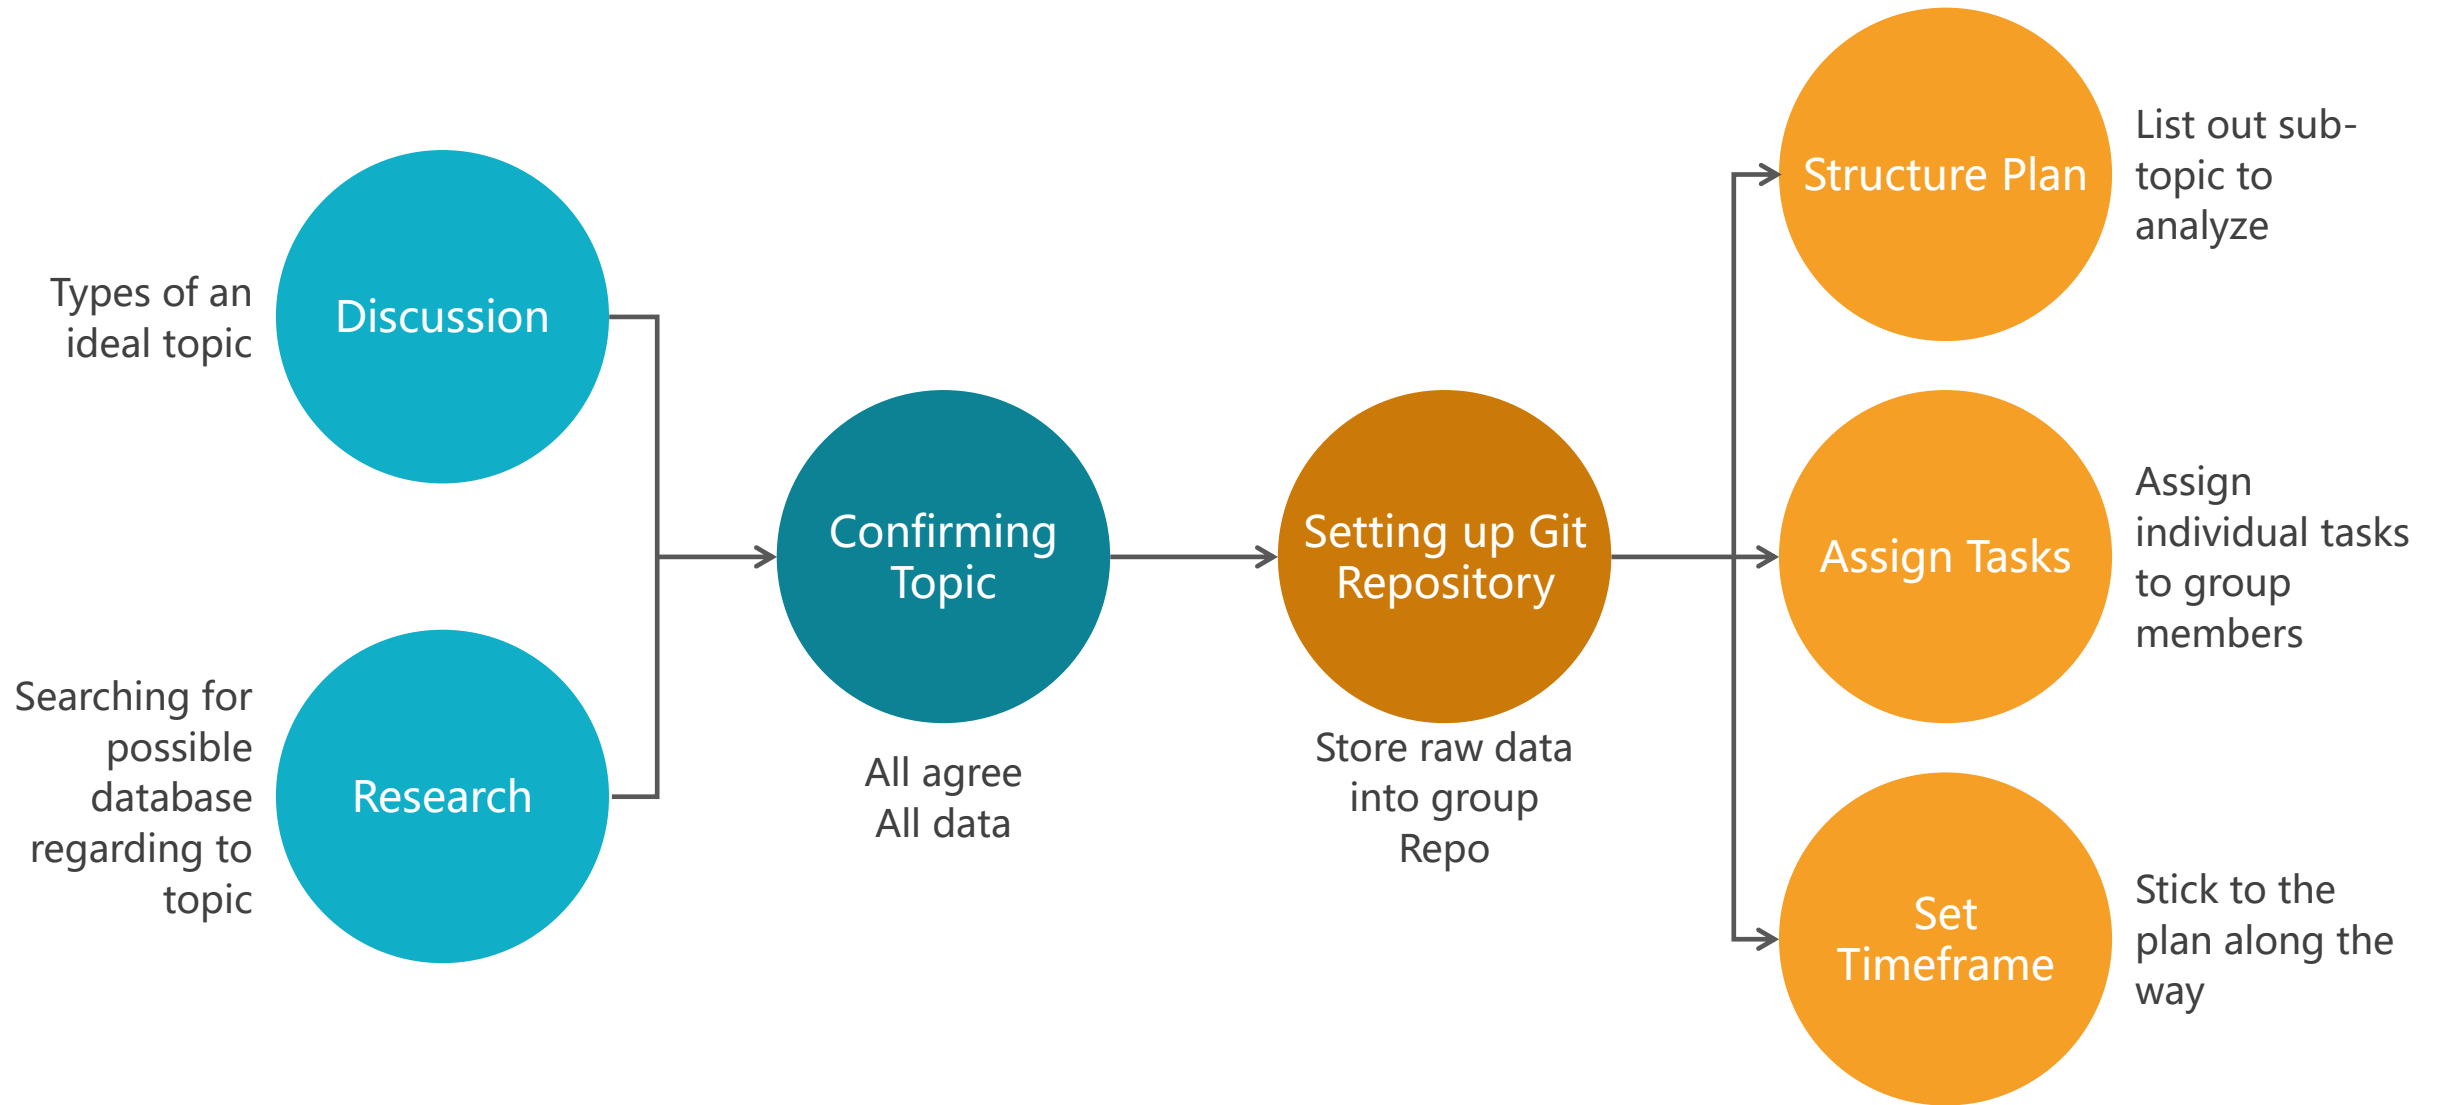

Queensland state-wide

Limitations:

This project is a very simple analysis that aims to show-case a range of data analysis techniques rather than to provide insights into a significant issue.

Concepts & Preparation

Developers

**Alan
SEED**

- Summary Statistics
- Student attendance VS offences rate

**Natalie
MANAHAN**

- Student attendance VS socio-economic score
- Overview and category views

**Mohini
YADAV**

- Student attendance VS school type
- Student attendance VS Remoteness area

**Matt
WANG**

- Student attendance VS Region
- Student attendance VS LGA

Conclusion

	Major Findings	Uncertainties
Deliverable	<ul style="list-style-type: none">› The student attendance rate for the government owned schools is irrelevant to the geographical locations according to the historical data;› Community schools in remote areas have the lowest attendance rate, most socio-economic disadvantage and highest rates of reported crime	<ul style="list-style-type: none">› School attendance data incomplete for years other than 2019;› Longer periods
Undeliverable	<ul style="list-style-type: none">› The student attendance rate could be affected by the population within each school-zone;	<ul style="list-style-type: none">› Could have school-zone vs population;› Could have weather effects monthly vs school attendance relatively;› Could have other cultural reasons based on the cultural group within a certain type of areas;› Could have driven to typical LGAs where has the large change of attendance rate

Thanks

Data Sources

Data

1.The Queensland Department of Education maintains a record of attendance rates at the 1237 State Schools and publishes the data on the Queensland Government Open Data Portal at

<https://www.data.qld.gov.au/dataset/state-school-attendance-rate>

The published data are for the period 2015 – 2019 and include the school ID, post code and other meta-data together with the attendance rates for the 5-year period.

2.The location of each school is published in the Queensland School Directory, which is found at

<https://www.data.qld.gov.au/dataset/state-and-non-state-school-details>

The data for each school includes the latitude and longitude of the School.

3.The Queensland Police Service provide information of the rates of reported offences in Local Government Areas at monthly intervals. The rates are reported as per 100,000 people and (an impressive) range of crimes. The data are updated annually and are available at

https://www.data.qld.gov.au/dataset/lga_reported_offences_rates

4.The Australian Bureau of Statistics published an index of Socio-Economic Indexes for Areas (SEIFA) after each Census, the data for 2016 can be found by Postal Area Code at

https://stat.data.abs.gov.au/Index.aspx?DataSetCode=ABS_SEIFA_LGA

We selected the Index of Relative Socio-economic Advantage and Disadvantage since we wanted to include the areas of relative advantage in the analysis. The data are reported as a relative measure, calculated for the residents in each post code and reported as percentiles of all post code areas in Queensland.
